the invisalign aligner

There are many different elements to an individual Invisalign treatment. Here are some detailed descriptions of the various components:

THE INVISALIGN ALIGNER

The Invisalign system consists of a 'series' of numbered and labelled aligners

Customised:
Align technology produces personal custom made aligners especially for you from the impressions taken of your teeth by the orthodontist.

Effective:
Start enjoying the benefits of straight teeth before you have finished treatment because alignment of the teeth starts from the beginning.

Comfortable:
No metal wires or brackets to irritate your gums or the inside of your mouth.

Clear:
Virtually invisible so people don't notice that you are having treatment.

Removable:
Easy to remove aligners to eat, drink, brush and floss and for special occasions.

Invisalign aligners are made of strong proprietary medical grade thermoplastic material. It is ideal for creating a flexible and high quality finish from moulding processes.

Invisalign is fully approved by the FDA as a Class II medical device. Under FDA classification, this type of aligner is classified as a "medical device" because it is an apparatus used to treat a condition.

Your Invisalign aligners will be uniquely developed for your Invisalign orthodontic treatment plan. The aligners will be specially created for you and should fit comfortably over your teeth.
